Romit Chakraborty

Founder and CEO at Point Reyes Sound

+1 773-816-8338 | romit@pointreyessound.com | rchakraborty.dev | www.pointreyessound.com

Profile

Quantum chemist and architect of phase-space electronic structure theory. My research develops Quantum Boltzmann Equation (QBE) solvers that regularize mean-field singularities and scale the exponential walls of strongly correlated quantum matter. Building on postdoctoral research at UC Berkeley and doctoral training at the University of Chicago, I now direct Point Reyes Sound, Inc.

Skills

2012--now	**HPC**	Python, C++, MPI, Slurm, GPU Acceleration, Linux
2012--now	**Quantum Simulation**	FTQC, QEC, Quantum Boltzmann Equation (QBE)
2022--now	**Data Pipelines**	Vector Databases, ChromaDB, Azure
2023--now	**ML Infrastructure**	PyTorch, JAX, LLMs, LoRA

Experience

June 2026	**Founder & CEO**	Point Reyes Sound, Inc., San Francisco, CA
2024-2025	**Senior Quantum Solutions Chemist**	PsiQuantum, Palo Alto, CA, USA
2023-2024	**Staff Researcher in Quantum AI**	University of Chicago, Chicago, IL, USA
2017-2023	**Postdoctoral Research Fellow**	UC Berkeley & LBNL, Berkeley, CA, USA

Education

University of Chicago — *Chicago, IL, USA*

MS, Ph.D. in Theoretical and Computational Quantum Chemistry — *2012--2017*

Advisor: Prof. David A. Mazziotti

IIT Bombay — *Mumbai, India*

Master of Science in Chemistry — *2009--2012*

St. Stephen's College, University of Delhi — *Delhi, India*

B.Sc. (Hons) in Chemistry, with Physics and Mathematics — *2006--2009*

Appointments

Point Reyes Sound, Inc. — *San Francisco, CA*

Founder & CEO — *June 2026 -- Present*

- **Phase-Space Electronic Structure:** Formulated a Hessian-free orbital optimization framework utilizing continuous phase-space fluid advection and the Bhatnagar-Gross-Krook (BGK) collision operator to autonomously regularize mean-field singularities.
- **Quantum Boltzmann Entrainment Tensor (QBET):** Developed a framework coupling classical phase-space relaxation to an active-space quantum core, circumventing combinatorial active-space expansion and demonstrating monotonic CASSCF orbital convergence on multireference dissociation benchmarks up to 254-orbital basis sets.
- **Solid-State k-Space Decoupling:** Generalized the phase-space transport engine for periodic crystalline systems by projecting continuous Wigner distributions onto cGTOs, mapping multidimensional transport to decoupled matrix relaxations across the Brillouin zone.

PsiQuantum, Corp. — *Palo Alto, CA*

Senior Quantum Solutions Chemist — *Oct 2024 -- Mar 2025*

- Translated quantum chemical models of correlated electron systems into algorithmic compilation pipelines and active-space resource estimation frameworks for fault-tolerant quantum hardware architectures.

University of Chicago *Chicago, IL*

Staff Researcher in Quantum AI *Nov 2023 -- Oct 2024*

- **Physics-Grounded Generative Workflows:** Led the development of an equivariant framework conditioning generative models on exact physical invariants (molecular geometry, charge/spin multiplicity, point-group symmetry) to mitigate out-of-distribution mode collapse.
- **Physical Symmetry Integration:** Integrated point-group and rotational symmetries into multimodal foundation models, securing Microsoft Azure Accelerate Foundation Models Research funding for automated quantum chemical discovery.
- **Structural Verification Metrics:** Designed deterministic validation protocols for synthetic molecular configurations, evaluating model fidelity against exact graph automorphisms and quantum chemical invariant sets rather than heuristic approximations.

University of California, Berkeley & Lawrence Berkeley National Laboratory *Berkeley, CA*

Postdoctoral Research Fellow *2017 -- 2023*

- **MOF Chemistry:** Modeled dihydrogen binding and multi-ligand coordination at open metal sites (V(II), Cu(I)) in metal-organic frameworks under Prof. Martin Head-Gordon, validating predictions against experimental neutron scattering and adsorption isotherms (JACS, PCCP Hot Article).
- **Free Energy Decomposition:** Formulated an Absolutely Localized Molecular Orbital Free Energy Decomposition Analysis (ALMO-FEDA) to resolve vibrational and entropic driving forces in non-covalent binding thermodynamics (J. Phys. Chem. Lett.).
- **Quantum Chemistry Software:** Co-developed modular quantum chemistry capabilities for open-shell and correlated electronic structure as a code contributor to the open-source Q-Chem 5 package (J. Chem. Phys.).
